EDENIQ ADDS CORN OIL EXTRACTION TO ITS PORTFOLIO OF YIELD AND PROFIT ENHANCING SERVICES

EdeniQ concludes an exclusive license for Primafuel's oil extraction technology

Visalia, CA— June 8, 2010 — [EdeniQ](#), a California-based clean technology company serving the global biofuels industry, announced today that it has concluded an agreement to exclusively license Primafuel's state-of-the-art corn oil extraction technologies and purchase its associated assets.

"Adding Primafuel's corn oil extraction process to EdeniQ's list of services gives us yet another way to help corn ethanol producers bolster their financial and environmental performance," explained EdeniQ VP of Sales Larry Peckous. Used as a supplement to animal feed and as a feedstock for biodiesel, corn oil has gained favor as a valuable ethanol co-product. Peckous said that EdeniQ will immediately start marketing the Primafuel's technology to ethanol producers under the brand name Oil Plus™ because the technology not only produces more oil than competing technologies, but also synergistically integrates with EdeniQ's other yield enhancing technologies.

Richard "Root" Woods, the former CEO of Primafuel, has joined EdeniQ as VP of Market Development. "EdeniQ and Primafuel share a vision that today's corn ethanol producers will soon be multi-feedstock, multi-product bio-refiners," said Woods. "I am pleased that the unparalleled oil extraction process Primafuel developed will be rapidly commercialized by EdeniQ." Woods explained that Oil Plus can be cost-effectively added to current oil extraction operations to significantly boost yields, or can be implemented in plants that have not yet added oil extraction to their operations.

About EdeniQ

EdeniQ develops and delivers proprietary solutions that help bio-refiners worldwide reduce operating costs, increase profits, and improve environmental results. EdeniQ's first suite of yield-enhancing technologies, Corn³ and Eden³, substantially boost ethanol yields from corn and sugarcane. EdeniQ's Oil Plus technology lets corn ethanol producers cost-effectively tap the lucrative corn oil market. Soon EdeniQ will enable biofuels producers to economically convert a wide range of renewable, non-food biomasses into clean, affordable fuels and bio-chemicals. EdeniQ is Changing Energy™.
