

Make cellulosic ethanol production a reality.

Processing corn kernel fiber into cellulosic ethanol presents an innovative, profitable, and immediate opportunity for ethanol plants across the country.

Intellulose

With Intellulose, you can claim your own share of the cellulosic market and unlock additional profits using the right combination of technology and industry expertise. Edeniq can show you how to get started without the need for additional capital expenditures.

Edeniq

Intellulose

Our Intellulose technology provides a unique, integrated platform that increases your profits by producing cellulosic ethanol from the corn kernel fiber.

1

VALIDATION

Quantify the cellulosic ethanol gallons produced in your plant that qualify for D3 RINs and other valuable credits.

2

COMPLIANCE

Enjoy third-party peer reviews and compliance services from our partners.

3

SUPPORT

Receive ongoing data reporting, sample retention, and recalculation support to ensure that your plant remains in compliance.

Why Ethanol Plants Partner with Edeniq?

We rely on your existing fermenter and distillation equipment to produce up to 2.5% – or greater – cellulosic ethanol yield.

We can increase your potential yearly profits by millions of dollars from additional ethanol, corn oil, and cellulosic credits.

Our technology implementation is fast and requires very limited resources from the plant personnel.
